

What's a Central Vacuum System?

The central vacuum is a whole-house cleaning system installed within the walls of your home. Vacuumed dirt, dust, and debris is sent through a network of tubing to a unit that powers the system and filters everything captured by your vacuum.

Unrivalled Cleaning Power

Central Vacuums are **up to 5 times more powerful** than portable vacuums. Each power unit is equipped with a high-performance motor and filtration system to ensure that 100% of vacuumed dirt, dust, and allergens are removed from your home.

Longer Lifespan

While standard portable vacuums typically last 3-5 years (sometimes less), central vacuums **can last 20-30 years or more** with proper maintenance (according to Association of Home Appliance Manufacturers). Most VACUFLO power units come with a **Limited Lifetime Warranty**.

Quiet Operation

Since the power unit is installed away from the main rooms of your home, the **cleaning process is nearly silent**. Clean messes without muting the television or upsetting your pets.

Standard vs. Retractable Hose System ■ Which One is Right for You?

Standard

With a standard system, simply plug in the hose and you're ready to vacuum. Inlet valves will be strategically placed around your home for maximum cleaning coverage.

(Standard Inlet Valve shown left)

Retractable

With a retractable hose system, there's no need to carry the hose room-to-room to vacuum. The hose comes right out of the wall for the ultimate convenient cleaning solution.
